**TO:** Customers of ILSCO Extrusions Inc.  
**FROM:** IEI Management  
**SUBJECT:** Compliance with RoHS Directive (European Directive 2002/95/EC)

---

The purpose of the RoHS Directive is to restrict the use of certain hazardous substances in manufacturing and to reduce the waste management issues linked to these substances which are likely to pose risks to health and the environment. The RoHS Directive specifically addresses the reduction of use, and, the ultimate banning of the following substances:

- \* Cadmium
- \* Hexavalent Chromium
- \* Lead
- \* Mercury
- \* PBBs (Polybrominated biphenyls)
- \* PBDEs (Polybrominated diphenyl ethers)

Of the substances listed above, lead, cadmium & mercury are the only metallic elements that could exist in aluminum alloys. Hexavalent chromium is not present in aluminum or aluminum alloys. This letter certifies that lead, cadmium, and mercury are not used in the production of extruded profiles sold and marketed by ILSCO Extrusions, Inc.
